SUMMARY

Backend and DevOps focused engineer currently pursuing a B.S. in Data Science and Applications at IIT Madras. Co-founder of Aevrin, building the backend, AI red-teaming pipeline, and deployment infrastructure for an AI chatbot security platform. Growth Intern at Runnable, where automation pipelines helped drive 90M+ views in 4 to 5 months. Ships and maintains several production web and desktop applications with real users, spanning Node.js and Spring Boot backends, React frontends, and applied AI features such as vector search and LLM integration.

EDUCATION

B.S. Data Science and Applications Expected 2029
IIT Madras

Computer Science and Engineering Expected 2029
Scaler School of Technology

EXPERIENCE

Growth Intern 2025 - Present
Runnable

- Built Python based automation scripts and pipelines that automate recurring workflows, removing manual effort from the team's operations
- Designed and ran automated brand marketing and digital presence pipelines that contributed to 90M+ views across 4 to 5 months

ENTREPRENEURSHIP

Co-Founder MVP Stage
Aevrin

- Co-built an AI security platform (product name: Aegis AI) that audits chatbots for prompt injection, jailbreaks, sensitive data leakage, policy failures, and harmful outputs
- Own backend infrastructure end to end: API design, database architecture, and production deployment
- Built the core AI red-teaming pipeline, including model integration and automated adversarial test generation
- Set up CI/CD and deployment automation for the platform

KEY PROJECTS

Luxe - AI Powered E-Commerce Platform github, live demo

- Built a full backend with Express, MongoDB, JWT authentication, and Redis caching, with Stripe payments and Cloudinary media handling, plus Pinecone vector search and the Groq LLM API for an AI shopping assistant and product recommendations

ShadyShard - Client Side Developer Tools Platform github, live demo

- Platform of 500+ browser based tools that run entirely client side, with no uploads, accounts, or tracking, built with React, TypeScript, and Vite
- Set up a full test and release pipeline: unit tests (Vitest), end to end tests (Playwright), accessibility checks (axe-core), and pre-commit automation (Husky, lint-staged, commitlint)

SyncBase - Team Collaboration Workspace github, live demo

- React and TypeScript workspace with a Supabase backend and a Notion style block editor for team docs, task tracking, and project shipping
- Added offline-first local storage (IndexedDB via Dexie) so the app stays usable without a live connection

Twiligent - Social Media Analytics Dashboard 84 GitHub stars, github, live demo

- Node.js and Express backend that pulls YouTube and Instagram stats into a single dashboard that runs entirely on the user's own machine, with no subscription and no external data collection

ACHIEVEMENTS

- Special Mention**, Monad Blitz Bangalore (2026) - built AgentShield, adversarial safety checks for AI agents with tamper resistant proof and ERC-8004 style validation
- 2nd Place**, LaunchPad Bangalore (2026) - pitched Aegis AI
- 3rd Place**, Campus Fund Hackathon (2025) - built the MVP of Aegis AI
- 2nd Place**, Auraverse 2.0 Bangalore (2025) - built a deepfake detection pipeline with custom model training and inference

LEADERSHIP

- Core Member, Marketing Team - Ascent Tech Fest, Scaler School of Technology

TECHNICAL SKILLS

Languages	Java, JavaScript, TypeScript, Python, SQL
Backend	Node.js, Express, Spring Boot, REST APIs
Frontend	React, Vite, Tailwind CSS
Databases	MongoDB, Supabase (PostgreSQL), Redis
Cloud and DevOps	AWS, Google Cloud, Azure, Docker, CI/CD (GitHub Actions), Linux and shell scripting
AI and ML	Vector search (Pinecone), LLM integration (Groq), RAG pipelines
